

ENMG 616 Advanced Optimization & Techniques

Project I

Paper Selection

In this project, each student is required to summarize and present a journal/conference paper among the list shared in the following link [Paper Selection Google Sheet](#). Each paper can be presented by one student only and the selection of papers is completed by students according to a first-come-first-serve policy. In particular, students should enter the link and select one of the remaining papers (no more than one selection per student, and no more than one student per paper).

The google sheet includes the date of presentation. Thus, students need to take this into consideration when selecting the paper. The complete papers can be accessed via the following link: [Papers in PDF](#)

Report

You are required to submit a report that summarizes the main contribution of the paper. The report should be limited to 8 pages (1.5 spacing, font size 11, normal margins) and must include the following

- Introduction and Motivation (1-2 pages): Describe the problem assuming the reader has no prior knowledge on the subject. The work must be motivated by an application or gap in the literature.
- Literature (1-2 pages): Include the most related works and position the paper well in the literature.
- Problem Formulation (1 page).
- Methodology and Main Result (2-3 pages): This section should include the main contribution of the paper.
- Experiments (if existing).
- 1 page written by the student that links the work to class material. Explain how the material taught in class helped you better understand the paper and how the results extend on the material we covered in class.

The grade will be distributed as follows: 50% on the problem formulation and methodology sections with focus on the depth of understanding of the paper's contribution, 35 % on the remaining sections with focus on the ability to relate this work to the literature and class material, and 15% on the clarity and professionalism of the writing. The latter part of the grade will focus on the clarity of writing, flow of ideas, number of typos, including citations and references, ... Screenshots of theorems, tables, or plots from the paper should not be included in the report.

Presentation

You are required to present the selected paper in class according to the date assigned in the shared sheet. The presentation should be 10 minutes sharp including questions (8 minutes for the presentation and 2 minutes for questions). The presentation should include the same sections included of the report.

The grade will be distributed as follows: 30% on the problem formulation and methodology sections with focus on the depth of understanding of the paper's contribution, 25 % on the remaining sections with focus on the ability to relate this work to the literature and class material, 15% on the slides clarity and design, 10% on the timing of presentation, 20% on answering the questions. Screenshots of theorems, tables, or plots from the paper should not be included in the presentation.
